

# REHABILITATION WITH A PEDIATRIC FOCUS.

## Rehabilitation with a Pediatric Focus.

HealthBridge Children's Hospital Orange stands out as a leader in pediatric medical care and rehabilitation because we blend technology and services regularly seen in acute hospital settings into a family-centered, homelike environment. We focus on the care and treatment of children, adolescents, and young adults from birth to 21 years of age who have suffered from a disabling injury or illness. Individualized treatment plans address the medical, emotional, social, and physical needs of each child. Care is also coordinated with the school district, regional center, and other community agencies.

## Team Approach for Positive Outcomes

Our team of professionals is experienced in guiding children and adolescents toward achieving positive functional outcomes. This interdisciplinary approach utilizes specialists from a wide range of disciplines from physicians, psychologists, and therapists to social workers and case managers.

## Environment that Promotes Recovery

We understand and recognize that a child's family and environment play an important role in the recovery process and attainment of goals. The rehabilitation team encourages families to participate in their child's care and development of treatment plans. The homelike setting provides a warm, nurturing environment that accelerates the healing process and encourages growth. Private rooms facilitate quality time with parents, friends, and family members. Unlike traditional hospital settings, children participate in activities both indoors and outdoors. This relaxed environment is conducive to family training and an easier transition home.

## INPATIENT ADMISSIONS PROCESS

HealthBridge of Orange's admission team works closely with referring facilities, case managers, and family members to ensure the admissions process is efficient. **To refer a patient or to schedule a complimentary informational session or tour for your patient at Orange's pediatric facility, HealthBridge Children's Hospital Orange, please call the admissions office.**

*All commercial insurance, private pay, and most managed and traditional Medicaid plans accepted.*

## PROGRAMS

### Acute Rehabilitation

Intensive physical, occupational, and speech therapy helps to restore a child to optimal functioning levels following a catastrophic illness or injury. This program addresses:

- » Hearing/Visual Impairments
- » Spasticity Management
- » Oral Motor Dysfunction
- » Feeding & Swallowing
- » Strength & Coordination
- » Activities of Daily Living
- » Cognitive Issues
- » Sensory Integration
- » Behavior/Play Skills
- » Mobility

### Acute Medical Care

Services are provided for children whose ability to breathe has been compromised and are dependent on a tracheostomy and/or mechanical ventilation. Ventilators used have the latest modes of ventilation for ease of breathing and were chosen for portability. Monitoring of vital signs is available from the bedside to the nurse's station to manage the most complex cases. ICU step down is also available. This level of care is also for children who are medically stable and no longer need neonatal or pediatric intensive care, but require ongoing intense monitoring and complex medical management, due to, but not limited to pulmonary and/or cardiac conditions, brain injury, infectious disease, neurological, and metabolic disorders. Ongoing assessment is provided for:

- » Ventilator Weaning
- » Equipment Needs
- » Rehabilitation
- » Family Training for Transition to Home
- » Decannulation
- » Post-Surgical Support
- » Complex Wound Care
- » IV Antibiotics
- » Total Parenteral Nutrition
- » Pain Management
- » Orthopedic Care
- » Complicated Transplant Recovery
- » Medication & Medical Management

### Subacute Care

These services are for children who no longer need the array of services provided in the traditional acute hospital setting, but may still require observation, monitoring, and continued medical supervision. The following services are also for children who are technologically dependent, whose recovery may be slow or indefinite. The goal is to integrate complex medical care while providing normalcy and the best quality of life possible for parents wishing to transition their child home. This program provides:

- » Coordination of Community Resources, Nursing, & Equipment Needs
- » Extensive Family Training
- » Home Adaptation

### Outpatient

Physical, occupational, and speech therapy are provided for children who may have been affected by illness, learning disabilities, or developmental delays due to, but not limited to the following:

- » Down Syndrome
- » Cerebral Palsy
- » Orthopedic Injuries
- » Brain Injury
- » Torticollis
- » Autism Spectrum Disorder
