HEALTHBRIDGE RESIDENTIAL SOLUTIONS

RESIDENTIAL REHAB PROGRAM

*Where specialized care begins
and hope never ends*

healthbridgecc.com

HealthBridge **Residential Solutions** is a fully integrated, outcomes-driven program for adults who have sustained a neurological injury as a result of trauma or other related medical event. The program, tailored to each resident's needs and preferences, offers various levels of neurorehabilitation, including vocational training and social skills building, and features a high staff-to-patient ratio and 24/7 care in an environment conducive to quicker community reintegration and optimal independence.

RESIDENTIAL REHAB PROGRAM

In addition to our medical post-acute care and rehabilitation program in St. Louis, we offer a residential rehab program for adults who have sustained a neurological injury as a result of trauma or other related medical events. HealthBridge provides a fully integrated residential and community program that facilitates the transition to home, and in some cases, the return to work.

These residents are not ready to live independently, but do not require the skill level for care and rehabilitation offered in an inpatient facility either. This program is a true community reintegration and vocational rehabilitation program. Residents are involved in a variety of activities throughout the day, both on and off campus, while interacting with other residents facing similar challenges. Our treatment team assesses the needs of each individual resident and develops a targeted program centered around the unique services required for each resident.

RESIDENT CENTERED + OUTCOMES DRIVEN + FAMILY FOCUSED

COMMUNITY-BASED SETTING

HealthBridge's Residential Solutions Program located in St. Louis (on the same campus as our post-acute care and rehabilitation program) provides a beautiful setting for recovery, offers appetizing meals, and allows its residents to surround themselves with their own belongings in a private apartment. For those who no longer require around-the-clock nursing or skilled services, our program offers solutions from various levels of neurorehab to supported living to semi-independent living. With a high staff-to-patient ratio and 24/7 care, we provide an environment conducive to quicker community reintegration.

HealthBridge's campus offers a full continuum for brain injury and spinal cord rehabilitation, allowing patients in need of specialty nursing to be treated at our adjacent facility, while still receiving treatment from the same therapy team.

At HealthBridge, we believe that every person, through individualized treatment plans, personalized attention and intensive treatment has the opportunity to improve their quality of life and live at their highest level of independence.

DIAGNOSES SERVED
